

[Princeton researcher digs into peanut allergy controversy](#)

The once-popular peanut snack is now a banned substance at many schools, offering insights into how a rare, life-threatening food allergy can prompt societal change.

[Evolution picks up hitchhikers](#)

In a twist on "survival of the fittest," researchers have discovered that evolution is driven not by a single beneficial mutation but rather by a group of mutations, including ones called "genetic hitchhikers" that are simply along for the ride.

[A sound idea: Innovative lens takes shape as commercial product](#)

The path from sound idea to startup company can be rocky, but engineering professor Craig Arnold decided to take the risk. His invention, a new kind of microscope lens that focuses in response to sound waves, is now on the market.

[From our blog: A faster vessel for charting the brain](#)

Princeton University researchers have created "souped up" versions of the calcium-sensitive proteins that for the past decade or so have given scientists an unparalleled view and understanding of brain-cell communication.
