

## Genetic 'instruction set' for antibodies knocks down hepatitis C in mice

A triple-punch of antibodies both prevented hepatitis C infection and wiped out established disease in mice, according to new research led by Princeton University. Instead of delivering the antibodies directly, the researchers gave mice an "instruction set" of genes for antibodies that target key portions of the hepatitis C virus.

## Fall foliage season may be later, but longer on warmer Earth

Climate change could postpone fall leaf peeping in some areas of the United States as summer temperatures linger later into the year, Princeton University researchers report in the journal *Global Ecology and Biogeography*.

## 'Solid' light could compute previously unsolvable problems

Researchers at Princeton University have begun crystallizing light as part of an effort to answer fundamental questions about the physics of matter. The researchers are not shining light through crystal – they are transforming light *into* crystal.

## Faculty Focus: Jacob Shapiro on the threat of ISIS

Jacob Shapiro, associate professor of politics and international affairs in Princeton's Woodrow Wilson School, discusses the United States' action against the Islamic State.

### Events

*Free and open to the public*

**TODAY: Fri. Sept. 26,  
9:00 am - 6:00 pm**

#### **Princeton Studies Food**

A one-day event showcasing food and agricultural systems research and interest at Princeton. *Wallace Hall 300, Princeton University*

**Wed. Oct. 15, 4:30 pm - 6:00 pm**

#### **What's Gone Wrong in Washington**

A talk by Olympia J. Snowe, who served in the U.S. Senate from 1995-2013 and as a member of the U.S. House of Representatives from 1979-1995. *Dodds Auditorium, Robertson Hall, Princeton University*

**Research at Princeton** is a monthly newsletter publicizing discoveries made by University faculty, research staff and students. It is produced by the Office of the Dean for Research.
