

Reducing long-term nuclear risks in Iran

The long-term risks of Iran's nuclear program could be reduced through a multinational partnership, according to a policy report published in the journal *Science*.

Autoimmune diseases and solar storms

A new study shows a "highly significant" correlation between periodic solar storms and incidences of rheumatoid arthritis (RA) and giant cell arteritis (GCA), two potentially debilitating autoimmune diseases.

Putting two and two together to make unexplored chemicals

Researchers at Princeton have developed a new catalyst that may give unprecedented access to cyclobutanes, four-membered ring-containing molecules of interest to the pharmaceutical and fine chemical industries.

Heather Howard on the Affordable Care Act

Heather Howard, lecturer in public affairs at Princeton's Woodrow Wilson School of Public and International Affairs, discusses the U.S. Supreme Court decision to uphold a key provision of the Affordable Care Act, or ACA, allowing more than six million Americans to keep health insurance subsidies.

"Gold-standard" clinical trials have shortcomings

Double-blind clinical trials fail to measure how a medication's performance can vary based on patients' lifestyle choices, especially if patients change their habits because they are

Events

Free and open to the public
