

Research

at Princeton

Summer 2016

With droughts and downpours, climate change feeds Chesapeake Bay algal blooms

Extreme rainfall cycles caused by increased climate variability may increase the severity of algal blooms.

Princeton-UCLA study finds gray wolves should remain protected

The genetic ancestry of North America's wild canines suggests that arguments for removing gray wolves from endangered species protection are incorrect.

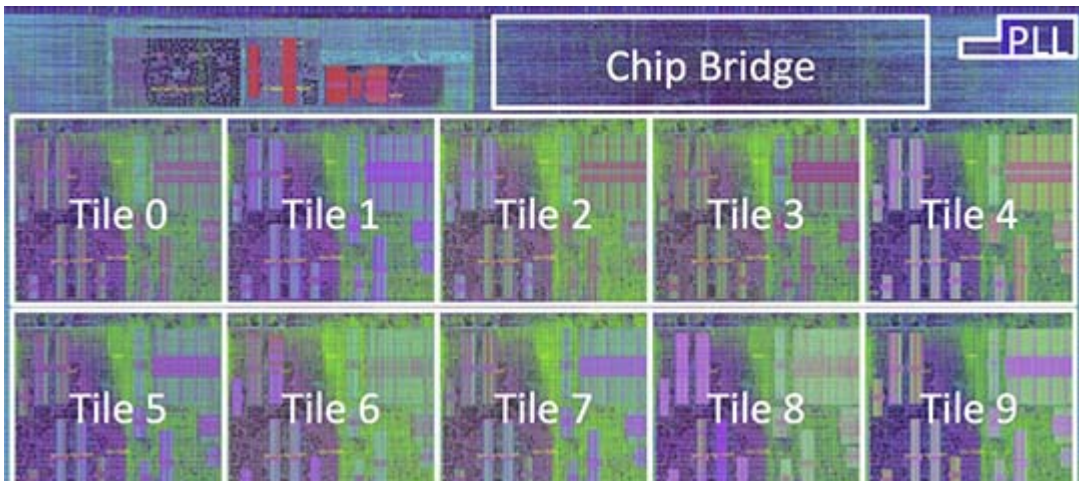

Sam Wang looks for order in chaos – in neuroscience, political polling and redistricting

Neuroscientist Wang discusses the 2016 campaign in the Woodrow Wilson School podcast "Politics and Polls."

Undergrads experience Princeton research

More than 50 college students from around the nation participated in the Research Experience for Undergraduates (REU) program, which is funded by the National Science Foundation.

New microchip demonstrates efficiency and scalable design

The chip promises to boost performance of online services from email to social media.
